FileMaker 16 Released

This week saw the release of FileMaker 16. There are many nice new features for our Developers, but here are some that might be of benefit for our clients.

FileMaker

- The interface on Windows systems modernised
- More user Connections with FileMaker WebDirect
- More Integration to other data sources including JSON functions
- Server side printing of PDF (reducing report printing time)
- Printing PDF's with WebDirect

Currently we are doing testing with the new software with Denbigh Administration.

Please do not upgrade, we will notify everyone when our testing is complete.
